

Regain™ Hybrid Ryegrass

Pasture grasses

600mm+

4.8–8.0

Most soil types

Regain™ Hybrid ryegrass is a combination of late maturity tetraploid hybrid ryegrasses.

Regain™ Hybrid can be used to 'top-up' run-down pastures by oversowing into established perennial or hybrid stands. Regain Hybrid can also be sown as a sole stand for a 2+ year high-quality pasture. The late-maturity of Regain Hybrid will allow the for late-season quality well into summer (under high rainfall or irrigated conditions). The genetics of Regain Hybrid will also perform well for winter and early-spring growth, superior to that of perennial ryegrass options helping fill critical feed deficits. For a long-termed pasture phase, Barenbrug recommends the use of Shogun NEA (2-3 year), Samurye NEA12 (2-4 years) or Forge NEA hybrid (3-5 years) ryegrasses that will offer superior long-term performance through the NEA series of endophytes to deter important insect pests such as black-beetle, root aphid and Argentine stem weevil.

Regain™ Hybrid is a low endophyte option and recommended for sheep and cattle only. Regain Hybrid is not suitable for equine forage.

Key features

- Late maturity
- Tetraploid
- Hybrid ryegrass

Key benefits

- Late season quality
- Lush, highly digestible tetraploid forage
- Longer-lived than annual ryegrass

Sowing rates:

Sole grass, drilled	25–35 kg/ha
Oversowing:	15–25 kg/ha
In ryegrass mixes:	15–25 kg/ha
Sowing depth:	10 – 15 mm
