

Regain™ Perennial Ryegrass

Pasture grasses

650mm+

4.8–8.0

Most soil types

Regain™ Perennial ryegrass combines late maturity Perennial diploid and tetraploid ryegrasses.

Regain Perennial can be used to 'top-up' run-down pastures by oversowing into established perennial or hybrid stands or can be sowed as a sole stand for a 3+ year high-quality pasture. The late-maturity of Regain Perennial will allow the for late-season quality well into summer (under high rainfall or irrigated conditions). The background genetics of Regain Perennial will also perform well for winter and early-spring growth, superior to that of many perennial ryegrass options. For a better long-termed pasture solution, Barenbrug recommends the use of Maxsyn NEA4, 4front NEA2 or Array NEA2 perennial ryegrasses that will offer superior long-term persistence & performance through the NEA series of endophytes to deter important insect pests such as black-beetle, root aphid and Argentine stem weevil.

Regain™ Perennial is a low endophyte option and recommended for sheep & cattle.

Key features

- Late maturity
- Tetraploid & Diploid blend
- Perennial ryegrass

Key benefits

- Late season quality
- Lush, highly digestible forage
- Longer-lived than Italian ryegrass

Sowing rates:

Sole grass, drilled	25–35 kg/ha
Oversowing:	15–25 kg/ha
In ryegrass mixes:	15–25 kg/ha
Sowing depth:	10 – 15 mm
